

Seed Packet Instructions

1. Print this page on a piece of paper. Regular paper works, but so does colored or kraft paper.
2. Cut along the solid line (the outside edge of the seed packet).
3. Fold the seed packet on the dashed lines.
4. Apply glue along the dotted areas on the flaps labeled "A" and "B". We recommend using a tape roller—it's what we've had the best results with!
5. Fold "A" and "B" flaps in, and then close the big "C" flap over top to seal.
6. Fill in the information on the blanks of the seed packet.
7. Fill the seed packet with seeds.
8. To close the top flap ("D"), apply a line of **repositionable tape runner** on the underside of the flap. Fold down and press to close. This allows the packet to be resealable for many uses!
